

The Investigating and Practicing on Digitalization Construction of Cultural Relics of Shaanxi Province

Provincial Bureau of Shaanxi

The digitalization construction work of cultural relics of Shaanxi is unifying programmed by Shaanxi Provincial Bureau and being implemented gradually. Four kinds of databases will be constructed during the programming work includes “Museum Collected Cultural Relics Database, Fields Cultural Relics Database, Judicial Identified Cultural Relics Database and Circulating Cultural Relics Database.”

In accordance with the requirements of the project of “Survey on Cultural Relics and Database Management System Construction”, and as one of the second promoting provinces, Shaanxi Province has started up with the Project of the Museum Collected Cultural Relics Database Construction since March, 2006. Therefore, we have established “Shaanxi Provincial Cultural Relics Database Center” to be in charge of the implementation of the Project. After nearly five years of construction, we have completed all the construction work of Museum Collected Cultural Relics Database throughout the Province, and have entered into the recording and synthesis phase for the general relics.

For the digital resources have been integrated, we tried to apply it at three levels. One is the management level, we have completed the provincial level platform and the construction of the secondary nodes to all the municipalities, county agencies and grass-roots cultural relics management institutions, and basically realized the real-time updating of the cultural relics information; Second is work and research level, we have established a completed searching system; Third is the social public application level, we are planning to construct “Shaanxi Cultural Relics Information Website” and to realize it as a communicating platform with publics, and the work has been started up and will soon meet with the publics.

Mr. Zhou Kuiying.
